

1 Fungi

Mushrooms are fungi. Fungi are a group of living organisms which are classified in their own kingdom. This means they are not animals, plants, or bacteria. See these fungi up close and personal.

2 Butterflies

In just 9 to 14 days the transformation from caterpillar to butterfly is complete. See both together and larger than life.

3 Trees

Many different types of animals can be found living in the trees, including insects, arachnids, amphibians, reptiles, birds, and mammals. Can you find these trees' inhabitants?

4 Bees & Pollinators

While trees and woods are essential to filter our air, bees are vital to both pollinate the food we need to survive, and pollinate many of the trees and flowers that provide habitat for wildlife. Without bees, much life would cease to exist.

5 Story Time

Story time will evoke imaginations and give kids a chance to write their own story. While sitting on the magic acorn, be sure to listen for the enchanted sounds coming from the nearby garden. If you are feeling musical, visit Harmony Place and create your own melody.
